

AI Workflow Automation

Automate repetitive business processes with practical AI, connected systems, structured data, and human review where it matters.

FROM MANUAL STEPS TO A CONNECTED WORKFLOW

Representative service sample • Designed and developed by DC Design Haus

Service Overview

One clearly defined business workflow, designed to reduce repetitive manual work while preserving the human decisions that still matter.

BASE SERVICE

Starting at \$595 • 7-day delivery • 1 revision Designed for workflows involving documents, forms, email, data movement, content processing, research, notifications, approvals, CRM activities, reporting, and similar structured business tasks.

SAVE TIME

REDUCE MANUAL WORK

IMPROVE ACCURACY

SCALE PROCESSES

Example Future-State Workflow

A representative pattern. The final workflow is designed around the client's actual systems, inputs, approvals, and outputs.

1

CAPTURE

Form, email, file, scheduled event or other agreed trigger.

2

PROCESS

AI extracts, classifies, summarizes or structures information.

3

DECIDE

Rules route the workflow and identify exceptions.

4

REVIEW

A person approves, rejects or adjusts where appropriate.

5

ACT

Update systems, notify teams or create structured outputs.

What the Automation Can Include

Document Processing

Extract, classify, summarize or structure information from documents.

Email & Form Automation

Trigger actions from submissions, incoming messages or defined events.

App & API Integration

Connect supported systems, APIs, webhooks or editable applications.

AI Workflow Logic

Use AI where it adds value and conventional automation where it is more reliable.

Structured Outputs

Create records, spreadsheets, database entries, CRM updates or JSON.

Notifications & Approvals

Route work for review, approval, rejection or exception handling.

Human-in-the-Loop by Design

Automation should remove repetitive work without removing judgment from decisions that require context, accountability, or review.

AUTOMATE

Repeatable, rules-based steps, data movement, formatting, routing and routine processing.

REVIEW

Low-confidence outputs, exceptions, sensitive actions and important communications.

DECIDE

Business judgment, approvals, strategy, accountability and decisions requiring context.

Implementation Approach

01

DEFINE

Confirm workflow, systems, trigger, inputs, outputs and success criteria.

02

MAP

Document the current process and identify automation boundaries and human checkpoints.

03

BUILD

Configure workflow logic, AI processing, connections and structured outputs.

04

TEST

Validate agreed requirements, common scenarios, exceptions and handoff points.

05

HAND OFF

Deliver the completed automation with basic documentation and agreed instructions.

Optional Service Upgrades

Additional system integration

+ \$150

Human approval workflow

+ \$125

Advanced workflow logic

+ \$175

AI document processing

+ \$195

Workflow documentation package

+ \$150

Priority 4-day delivery

+ \$250

Third-party software, API usage, subscriptions, hosting and licensing fees are not included. Larger multi-system or custom-development projects are scoped separately.

What the Client Receives

- **One agreed AI-powered business workflow**
- **Configured workflow logic and supported integrations**
- **Structured inputs and outputs**
- **Human review or approval checkpoints where appropriate**
- **Testing against agreed requirements**

PRACTICAL AI. CONNECTED SYSTEMS. HUMAN OVERSIGHT.

Representative service sample created by DC Design Haus. No fabricated client results, testimonials, ROI or performance metrics are included.
